LAPORAN PRAKTIKUM WEB PROGRAMMING

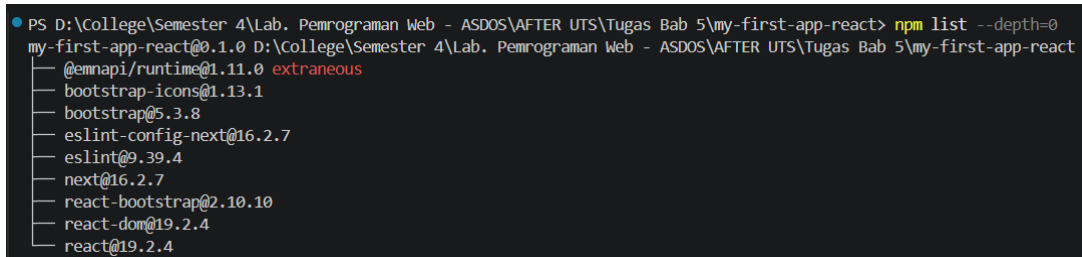

BAB V (FRAMEWORK UI REACT JS PART 1)

1. Membuat project baru menggunakan framework Next.js dengan App Router.

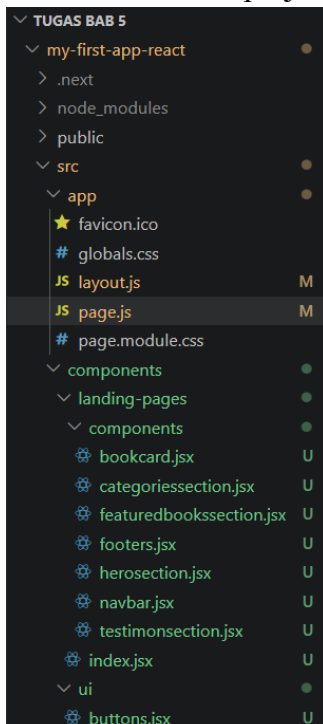

```
PS D:\College\Semester 4\Lab. Pemrograman Web - ASDOS\AFTER UTS\Tugas Bab 5\my-first-app-react> npm list --depth=0
my-first-app-react@0.1.0 D:\College\Semester 4\Lab. Pemrograman Web - ASDOS\AFTER UTS\Tugas Bab 5\my-first-app-react
├── @emnapi/runtime@1.11.0 extraneous

```

4. Membuat reusable button component yang dapat digunakan pada seluruh aplikasi. (buttons.jsx)

```

1 import React from "react";
2
3 const Button = ({
4   children,
5   variant = "primary",
6   size = "md",
7   outline = false,
8   icon,
9   iconPosition = "left",
10  disabled = false,
11  loading = false,
12  fullWidth = false,
13  className = "",
14  onClick,
15  type = "button",
16  ...props
17 }) => {
18   const variantClass = outline
19     ? `btn-outline-${variant}`
20     : `btn-${variant}`;
21
22   const sizeClass = size !== "md" ? `btn-${size}` : "";
23   const widthClass = fullWidth ? "w-100" : "";
24   const disabledClass = disabled || loading ? "disabled" : "";
25
26   const buttonClasses =
27     `btn ${variantClass} ${sizeClass} ${widthClass} ${disabledClass} ${className}`;
28
29   return (
30     <button
31       type={type}
32       className={buttonClasses}
33       onClick={onClick}
34       disabled={disabled || loading}
35       {...props}
36     >
37       {loading ? (
38         <span
39           className="spinner-border spinner-border-sm me-2"
40           role="status"
41           aria-hidden="true"
42         ></span>
43         Loading...
44       ) : (
45         <div>
46           {icon && iconPosition === "left" && (
47             <i className={`bi bi-${icon} me-2`></i>
48           )}
49           {children}
50           {icon && iconPosition === "right" && (
51             <i className={`bi bi-${icon} me-2`></i>
52           )}
53         </div>
54       )}
55     </button>
56   );
57 }
58
59 export { Button };

```

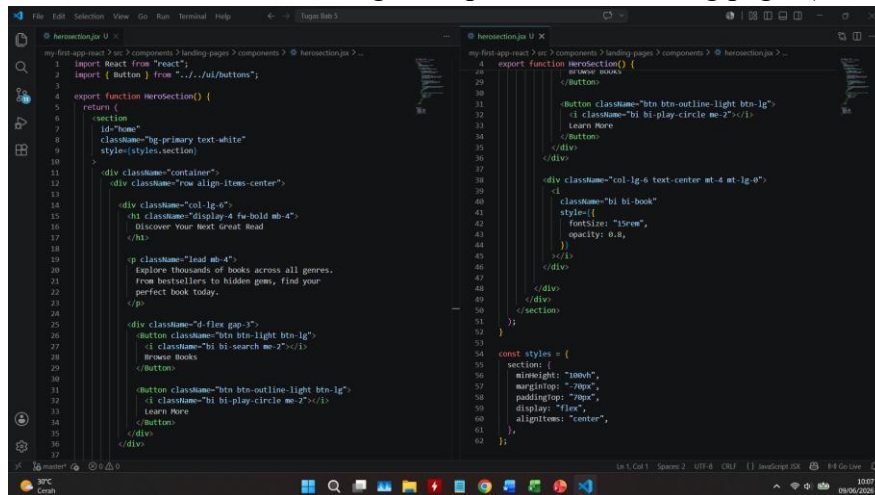

5. Membuat komponen navigasi utama aplikasi. (navbar.jsx)

```

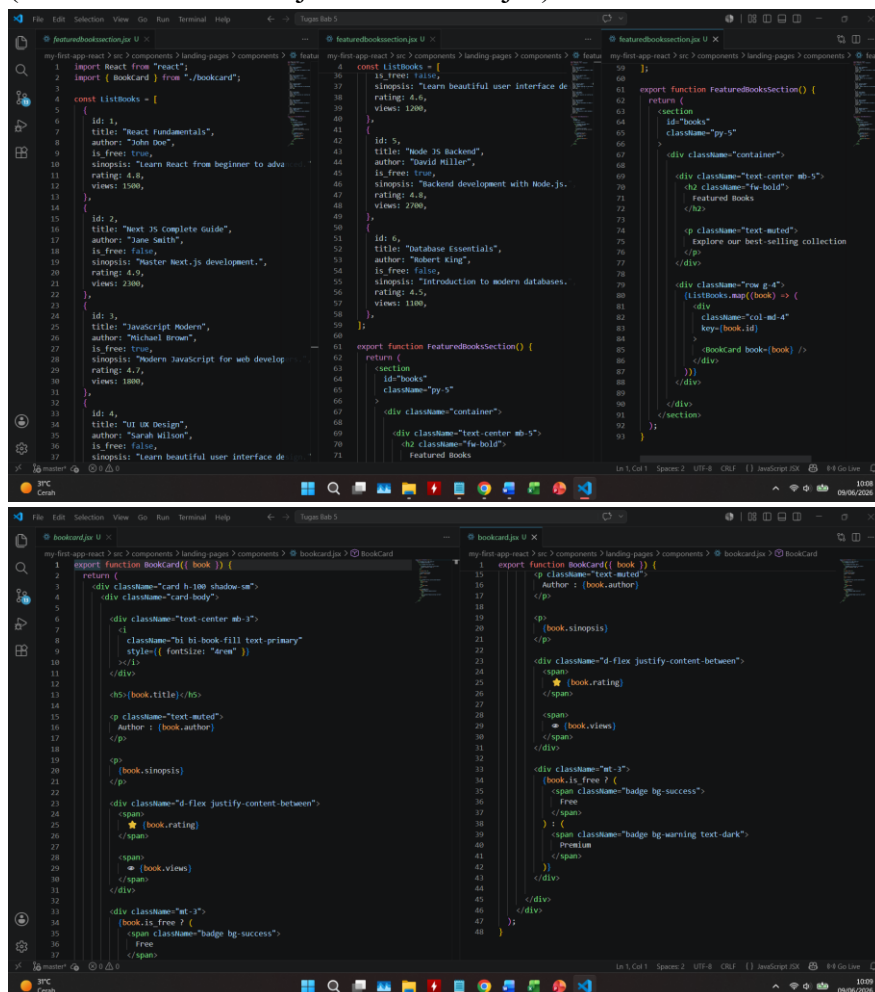

1 import React from "react";
2 import { Button } from "../ui/buttons";
3
4 export function Navbar() {
5   const menuNav = [
6     { id: 1, name: "Home", link: "#home" },
7     { id: 2, name: "Books", link: "#books" },
8     { id: 3, name: "Categories", link: "#categories" },
9     { id: 4, name: "About", link: "#about" },
10    { id: 5, name: "Contact", link: "#contact" },
11  ];
12
13  return (
14    <nav
15      className="navbar navbar-expand-lg fixed-top"
16      style={styles.navigationBar}
17    >
18      <div className="container">
19        <a
20          className="navbar-brand" href="#"
21          <i className="bi bi-book me-2"></i>
22          Readly <sup></sup>
23        </a>
24
25        <button
26          className="navbar-toggler"
27          type="button"
28          data-bs-toggle="collapse"
29          data-bs-target="#navbarNav"
30        >
31          <span className="navbar-toggler-icon"></span>
32        </button>
33
34        <div className="collapse navbar-collapse" id="navbarNav">
35          <ul className="navbar-nav mx-auto">
36            {menuNav.map((menu) => (
37              <li
38                className="nav-item" key={menu.id}
39                <a
40                  className="nav-link" href={menu.link}
41                  {menu.name}
42                ></a>
43              </li>
44            ))}
45          </ul>
46
47          <div className="d-flex gap-2">
48            <button
49              className="btn btn-light text-dark"
50              <i className="bi bi-box-arrow-in-right me-2"></i>
51              Sign In
52            </button>
53
54            <button
55              className="btn btn-warning"
56              <i className="bi bi-person-plus me-2"></i>
57              Sign Up
58            </button>
59          </div>
60        </div>
61      </nav>
62    );
63  }
64
65  const styles = {
66    navigationBar: {
67      backgroundColor: "rgb(247,248,226,0.8)",
68      transition: "all 0.3s ease-in-out",
69    },
70  };
71 }

```

6. Membuat Hero Section sebagai tampilan utama landing page. (herosection.jsx)

7. Menampilkan daftar buku menggunakan array object dan map(). (featuredbookssection.jsx & bookcard.jsx)

8. Menampilkan kategori buku menggunakan data array. (categoriessection.jsx)

```

1 import React from "react";
2
3 const genre_data = [
4   { name: "Fiction", icon: "bi-journal-text", color: "primary" },
5   { name: "Non-Fiction", icon: "bi-newspaper", color: "success" },
6   { name: "Science", icon: "bi-lightbulb", color: "info" },
7   { name: "History", icon: "bi-clock-history", color: "warning" },
8   { name: "Biography", icon: "bi-person", color: "danger" },
9   { name: "Children", icon: "bi-balloon", color: "secondary" },
10 ];
11
12 export function CategoriesSection() {
13   return (
14     <section id="categories" className="py-5 bg-light">
15       <div className="container">
16         <div className="text-center mb-5">
17           <h2 className="fw-bold">Book Categories</h2>
18           <p className="text-muted">Browse books by category</p>
19         </div>
20         <div className="row g-4">
21           {genre_data.map((genre, index) => (
22             <div className="col-md-4" key={index}>
23               <div className="card text-center shadow-sm h-100">
24                 <div className="card-body">
25                   <i
26                     className={`bi ${genre.icon} text-${genre.color}`}
27                     style={{ fontSize: "3rem" }}
28                   ></i>
29                   <h5 className="mt-3">
30                     {genre.name}
31                   </h5>
32                 </div>
33               </div>
34             </div>
35           ))}
36         </div>
37       </div>
38     </section>
39   );
40 }

```

9. Menampilkan testimoni pengguna. (testimonsection.jsx)

```

1 import React from "react";
2
3 const user_testimonials = [
4   {
5     name: "Anton Sukanto",
6     review: "Amazing collection! Found all my fa",
7     rating: 5,
8   },
9   {
10    name: "Isnan Mulia",
11    review: "Fast delivery and great customer service",
12    rating: 5,
13  },
14  {
15    name: "Edi Nurachmad",
16    review: "Best prices I've found online.",
17    rating: 4,
18  },
19 ];
20
21 export function TestimonSection() {
22   return (
23     <section className="py-5">
24       <div className="container">
25         <div className="text-center mb-5">
26           <h2 className="fw-bold">What Our Readers Say</h2>
27           <p className="text-muted">Join thousands of satisfied book lov</p>
28         </div>
29         <div className="row g-4">
30           {user_testimonials.map((testimonial, i) => (
31             <div className="col-md-4" key={i}>
32               <div className="card h-100 shadow">
33                 <div className="card-body">
34                   <div className="mb-3">
35                     {[...Array(5)].map((_, i) => (
36                       <i
37                         className={`bi bi-star${
38                           i < testimonial.rating
39                             ? "-fill"
40                             : ""
41                         } text-warning`
42                       ></i>
43                     ))}
44                   <p>{testimonial.review}</p>
45                   <h6>{testimonial.name}</h6>
46                 </div>
47               </div>
48             </div>
49           ))}
50         </div>
51       </div>
52     </section>
53   );
54 }

```

10. Membuat footer sebagai bagian akhir halaman. (footers.jsx)

```

1 import React from "react";
2
3 export function Footers() {
4   return (
5     <footer
6       id="contact"
7       className="bg-light py-4"
8     >
9       <div className="container">
10        <div className="row">
11          <div className="col-md-4">
12            <h5>
13              <i className="bi bi-book-fill me-2"></i>
14              Readly+
15            </h5>
16            <p className="text-muted">
17              Your trusted online bookstore.
18            </p>
19          </div>
20          <div className="col-md-4">
21            <h6>Quick links</h6>
22            <ul className="list-unstyled">
23              <li>About Us</li>
24              <li>Contact</li>
25              <li>Privacy Policy</li>

```

11. Landing page berhasil dibuat menggunakan pendekatan Component Based Architecture pada React dan Next.js.

12. Kesimpulan: Pada praktikum ini berhasil dibuat sebuah landing page sederhana menggunakan React JS dan Next.js. Komponen dibagi menjadi beberapa bagian seperti Navbar, Hero Section, Featured Books, Categories, Testimonials dan Footer. Dengan pendekatan Component Based Architecture, kode menjadi lebih modular, mudah dan dapat digunakan kembali pada halaman lain.
